

69 Million+ Families Own Dogs

95% of Americans View Pets as Family Members

52% of homeowners surveyed acquired a pet after their policy began, but did not inform their insurer of the new family member.

THE PROBLEM

Many insurance companies use unreliable breed lists to deny, non-renew or cancel homeowners policies

Use of breed lists raises concerns of fair and equitable treatment

Consumers of low means are detrimentally impacted

- Some insurance companies are allowed to use **outdated** and **unsupported** dog breed/mix lists without any reliable data.
- These unreliable lists have a **detrimental impact** on uninformed consumers, people of color, and consumers of low means.
- Consumers do not consider the impact of their dog's breed on their homeowner's insurance coverage. Many consumers are **unaware of other options** for obtaining coverage. Pet-owning consumers must go **underinsured, uninsured, or relinquish their pets** to an animal shelter.
- Research suggests a **correlation between dog breed type and race as it relates to the perception of ownership.**
- There is **no reliable actuarial data** that supports making a distinction between dog breeds. DNA studies show that **visual identification** of a dog's breed based on physical features is unreliable.
- **Preferred Customers might receive a waiver** for their pets because of the business they are bringing to the carrier.
